

ITP 2023

29th International Symposium on Electro- and Liquid Phase-Separation Techniques

Rome, San Felice Circeo, September 13-17, 2023

ITP is one of the most recognized international symposium series in the field of separation science. As the previous editions, the 29th International Symposium on Electro- and Liquid Phase-Separation Techniques (ITP 2023) will address the latest developments and advances in all areas of electro- and liquid-phase separation techniques in multiple disciplines.

The ITP 2023 will continue the tradition of the series by updating attendees on the advances in different separation techniques and their applications in various areas with an emphasis on pharmaceutical, clinical, food and environmental analysis.

The dynamic ITP 2023 programme will again highlight a wide range of technologies that use electro- and liquid phase- separations, such as capillary and microchip electrophoresis, electrokinetic chromatography and electrochromatography, two-dimensional electrophoresis, high performance liquid chromatography (HPLC), ultra-high pressure liquid chromatography (UHPLC), and micro- and nano-scale HPLC.

One of the major aims of the symposium is to provide a forum for high-level scientific exchanges between analytically oriented scientists from the whole world in a friendly atmosphere. Special attention will be devoted to young scientists' presentations and posters.

Oral and poster presentations will be organized during the conference and the organizers encourage interested presenters to submit their abstracts as soon as possible.

ITP 2023 will take place in San Felice Circeo, one hour by car from Rome, Italy, in September 2023.

The organizers look forward to seeing you in San Felice Circeo!

About San Felice Circeo

San Felice Circeo is a small village still enclosed in its ancient roman walls, with ancient origins. It is one of the classic seaside villages with breathtaking views and the Mediterranean scent that you breathe in its alleys of white houses. But the Mediterranean one is certainly not the only scent we smell. Among the streets of San Felice Circeo there is also a scent of mystery, myth and legend, which cannot fail to remind us of Ulysses (the Latin name of the cunning Greek hero, king of Ithaca). In the Odyssey, Homer tells how Odysseus and his companions disembark in the island of Aeaëa, where they fall victims of an evil spell by the sorceress Circe. Homer narrates of a wonderful and wild land, referring to San Felice Circeo and its surroundings. To this day, the profile of the sorceress Circe would be visible in the silhouette of the mountain.

And so, captured by this mythical atmosphere, we will go to discover what to see in San Felice Circeo, letting ourselves be seduced by its magic. The village of San Felice Circeo is located on the homonymous mountain, Circeo mountain, a small promontory that rises in the waters of the Tyrrhenian Sea. We are in Lazio, in the center of the most significant promontory of the province of Latina, from which is only 20 km and definitely worth a visit, especially if you are in the agro-pontine area.

San Felice Circeo, like the whole promontory, is inserted within the Circeo National Park, one of the most heterogeneous parks that we have in Italy and that preserves intact four natural reserves, dunes, flora and fauna with a typically Mediterranean character. There are many activities and events that take place

within the park. Paths to follow, trekking, canoeing, guided tours, theme trails and much more. A real paradise for nature lovers.

Key dates

Conference: Start: 13th September

End: 17th September

Call for Abstract: Start: 15th March

Deadline for ORAL/POSTER: 20th May

Registration: Start: 15th March

Early registration until: 20th June

Late registration until: 31st August
